Whisper Laser Facial Rejuvenation

Discover the new sound of beauty of from the Whisper laser. The Whisper laser creates **a new level of safety and gentle smoothing of the fine lines and wrinkles.** It diminishes discoloration and improves skin texture with minimal down time. It is so gentle, it effectively treats even highly sensitive areas around the eyes, face, neck, chest and back of the hands without bleeding or need for anesthesia although we will recommend a topical anesthetic to minimize discomfort for the more sensitive tissues. You can have full photo facial treatment, and within 5 to 7 days, look years younger with softer, smoother, more radiant skin.

WHY WHISPER LASER?

Laser resurfacing involves using a light source to ablate the sun damaged outer layers of the epidermis to reveal the smooth underlying layers. With this laser, the skin is desiccated, layer by layer, enabling pinpoint accuracy and precise control of the ablation depth. **This creates a finer, more delicate result than available for either deep chemical peels, or the more aggressive carbon dioxide lasers.**

The Whisper Erbium-Yag laser effectively treats the following conditions:

- + Sun-induced wrinkles,
- + Mild to moderate photo-damaged skin
- + Dyschromia (variations in skin color)
- + Wrinkle reduction,
- + Acne scarring

The outer layer of skin cells, medium or deep epidermal cells are removed while at the same time heat is absorbed by the underlying dermal tissue to stimulate collagen renewal. There is a mild post procedure peeling which is spread over 2-7 days, occurring simultaneously with regrowth of new, healthy epidermis. Steroid creams may be prescribed to control the temporary, post-procedure sun-burned appearance. The result is a significant tightening of the skin without ever exposing the underlying dermis. Since the Whisper laser healing process is so subtle, women are able to generally use makeup the very next day.

The creation of new collagen caused by the thermal insult and subsequent fibroblast activation occurs over a period of a few weeks to a few months. This wound healing response leads to improvement in skin texture, the smoothing of fine lines and even reducing enlarged pores. We believe the Whisper Laser used in conjunction with our Glycolic program will augment each other to visibly revivify your skin.

Using the Whisper laser, we perform a superficial ablation with **minimal pain** or down time. **Fine lines and 90-100% of most lentigines known as age spots will disappear** achieving the equivalent of a medium depth chemical peel.
